

BOART LONGYEAR / ENERGY

ENERGY CLIENTS MEET BUSINESS NEEDS WITH FUSION

Created DI ETL mappings for populating the Business Objects Warehouse in order to implement Supply Chain Analytics. Facts included PO, AP, Source Performance, and SC Costs. Dimensions included Entity, Business Unit, Time, Vendor, Item, Cost Center, GL Account, Legal Entity, Location, Currency, Unit of Measure, Buyer, and Cost Types. Hierarchies created included Cost Center, Location, Product, and Account. A custom dashboard was created for the COO, which included several dynamic features, as well as custom javascript to allow pop-up menus off a report's dynamic hyperlinks. Custom reports were created against AP data, which included drillable, by hyperlinks, Vendor Spend Summary to Vendor Spend Detail.
