

FRITO-LAY / MANUFACTURING

MANUFACTURING INDUSTRY SUCCESSES

Created five business objects universes for three separate data warehouses and one transactional database and over thirty reports for six projects. Additional work included data design on the DB2 and Oracle platforms. Assisted in implementing the star schema execution path for Oracle's optimizer and integrated hints into the universe. Instructed the Pepsico Business Solutions Group on universe design, tricks and techniques, and SQL logic. Devised several strategies for "report bursting" and deployment. Created views and multiple types of indices to improve performance.

OTHER MANUFACTURING SUCCESS

PEPSICO

A DB2 to Oracle Business Objects repository migration for all of the Pepsico divisions (approx. 6500 BO users, 6.5 GB). Migration of a custom "User Registration" database as well as Business Objects Auditor. Data movement and mappings were performed using SQL Server DTS. Made a series of enhancements to Auditor reports and universes. Creation of custom Java applications, Webi on Unix and Oracle performance tuning.
