MANUFACTURING INDUSTRY SUCCESSES

Brio-to-Business Objects conversion project. Work involved converting over forty Brio reports, rebuilding Brio applications in both VB and JSP, creating a folder structure for Corporate documents within Webi, dynamic/dependant List of Values based on BO prompts within Webi, a Broadcast Agent monitoring and email script for failed jobs, a global email script which parses email addresses out of the Comments section of document properties as well as filters the document based on values assigned to addresses in the Comments section, drill-through from Summary to Detail reports via hyperlinks in PDF, dynamic Webi layouts based on document keywords as well as other Webi customizations through JSP, database tuning and hint integration, configuration of WebLogic against WebIntelligence, an export to Excel utility within Webi for full-client reports.

OTHER MANUFACTURING SUCCESS

TEXTRON

Implementation of an HR Data Warehouse from various sources of data. Primary source of HR data was Peoplesoft Transaction system. Additional systems from which the data model and DW was developed included ADP Payroll system extracts, SumTotal Learning Management System and Benefits system.

LILLY

Pharmaceutical Manufacturer. Designed and developed ETL routines for proof-of-concept phase for a very large data warehouse project. Our responsibilities included working with subject matter experts to analyze business requirements of trial lab results, design and development of mappings, unit and system testing, and extensive documentation of mappings.

EXEMPLAR

Business Objects deployment against SQL Server 2000 and DB2/400 V4R5 databases. Developed a Financials universe against the BPCS ERP application. Created a script to distribute reports via email using collaborative data objects within a Windows 2000 environment. Created a set of Executive Dashboard reports containing hierarchical drilling.
