

AMBULATORY QUALITY

IMPROVING PATIENT CARE THROUGH ANALYTICS

Improve the safety and quality of ambulatory healthcare

Our Ambulatory care solution focuses on two main areas of Ambulatory quality. Population Management or Preventative Care Management and Chronic Disease Management are the focal point of Fusion's Ambulatory care analytic solutions. Data, strategy, and collaboration are key to improving the efficacy of care provided to improve outcomes and reduce the cost of managing large patient populations.

In an everchanging healthcare environment Fusion's Ambulatory care focuses on the resolution of care gaps and the improvement of clinical practice guidelines for continual improvement with Population Health Management and Chronic Disease Management. Our solution helps identify care gaps thus mitigating the opportunity for adverse events and provide data for several quality improvement programs such as HEDIS, Medicare STAR, Accountable Care Organizations (ACO), and PQRS.

Improving preventive care and on-going ambulatory care of chronic disease patients improves patient outcomes and reduces hospital visits and cost. Different Ambulatory care programs are vital to payor contracts and incentives. Problem areas of ambulatory include:

- Poor Management of Chronic Disease Populations
- Increased frequency of Hospital and Emergency Department admissions
- Poor community and population outreach
- Increased gaps in patient care
- Delays in treatment and preventative care

SOLUTION BENEFITS

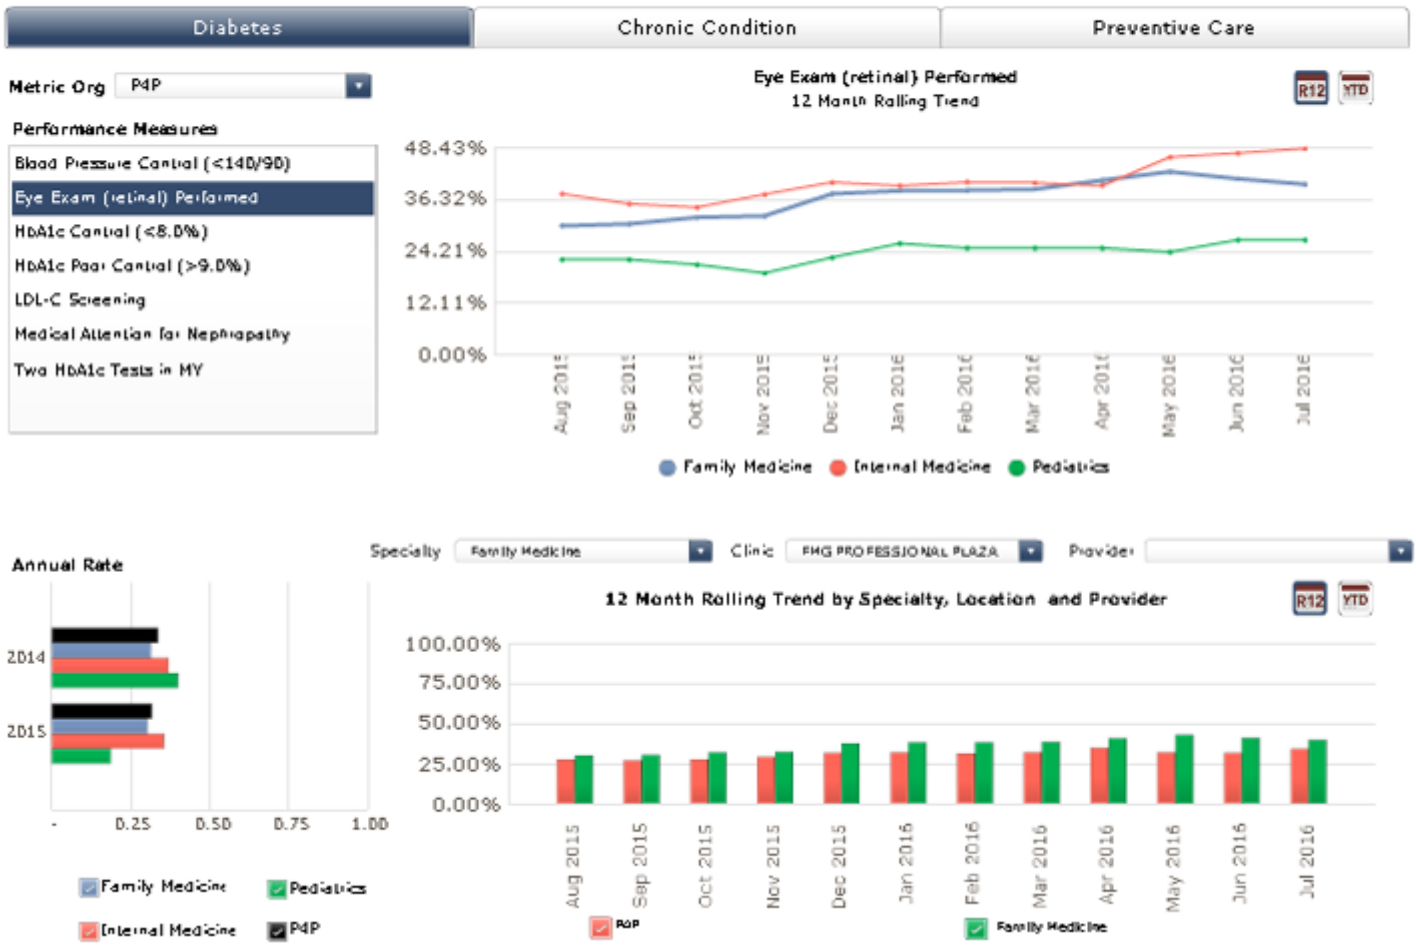

- Gaps in Population Health metrics. Identifying patients who need outreach or resolution of care gaps
- Pre-built metric definitions with data points needed to help improve speed to deliver reporting
- Population Health Management metrics (for ACO and Clinically Integrated Networks also)
- HEDIS metrics
- PQRS
- Medicare STAR reporting
- Care Management
- Evaluate and reduce health risks
- Pay for performance
